Technical Performance

- Strong impact resistance for everyday packaging applications
- Highly transparent with awesome clarity
- Great oxygen and flavor barrier properties keep packaging contents fresh and #unstinky
- Resists temperatures up to 45°C/113°F
- More rigidity and lower density than PET creates opportunity for material reductions through downgauging and yield improvement

Processing Characteristics

- Direct drop-in for PET, RPET, PVC and PS
- No specialized production facilities or hand-wrinking required - designed for existing extrusion and thermoforming equipment
- Lower processing temperatures means lower energy consumption during manufacturing, which means lower emissions. Shazam!
- Compatible with RF die-cutting, coining and hinged applications

Environmental Details

- Made from over 99% annually renewable, bio-based materials per ASTM D6866 testing
- Free from BPAs, phthalates and other Chemicals of Concern identified as potentially harmful
- Up to 77% reduction in CO₂/GHG emissions¹
- Recyclable and compostable in commercial composting facilities
